

Keyscan Aurora Software

Active Directory Integration

Keyscan Aurora now features expanded Active Directory integration with Keyscan Aurora Version 1.0.10.0 or higher.

The Active Directory integration within Aurora is available as an "Add-on" software module that requires a license code for activation.

With the new Keyscan Aurora release, people may be linked to their Active Directory record. Active Directory expedites system user permissions and day-to-day activities with Aurora including:

*Expedite
your daily
activities
with Active
Directory
integration*

Addition of People:

Utilize Active Directory to save time and effort by automatically adding new people and credentials to your access control system.

Revoking of Access Privileges:

Leverage Active Directory capability to automate removal of people who are no longer associated with their assigned credential(s).

Assignment of Site:

Automate assignment of people and credentials from Active Directory to only your selected sites.

Group Permission:

Streamline the addition and removal of group access control permissions by tying them to Active Directory groups.

Person Information Synchronization:

Manage person information by tying optional fields to Active Directory user properties.
